

Firman Aprilian Sugiharto

Fullstack Engineer

firman.apriliann@gmail.com | +62 851-1700-0255 | github.com/shiinobu | firman-aprilian.vercel.app

SUMMARY

Developer with 3.5 years of experience building and maintaining websites and web applications for clients and internal use, including CRM and POS systems, mostly in PHP and MySQL. Also builds backend projects in Go with PostgreSQL, JWT authentication, role-based access control and WebSocket, and works on the client side with React and Next.js.

SKILLS

Backend	Go (Gin, Gorilla Mux, GORM), PHP (Laravel), TypeScript (Bun, Hono, Prisma)
APIs and realtime	REST, WebSocket, JWT authentication, role-based access control
Databases	PostgreSQL, MySQL
Frontend	TypeScript, React, Next.js
Tooling	Docker, Docker Compose, GitHub Actions, Git

EXPERIENCE

Developer, PT. Benderaku Berkibar Selalu, Yogyakarta Oct 2022 to Mar 2026

- Developed and maintained web applications for client projects and internal needs, including CRM and POS systems that supported sales, customer service and daily operations.
- Implemented features, fixed bugs and handled ongoing application maintenance.
- Managed and updated the MySQL databases behind the applications.
- Debugged and troubleshoot problems to keep the applications stable.

PHP, MySQL, JavaScript, Git

Web Developer, Neox Indonesia 2020

- Supported development and maintenance of client and internal websites.
- Implemented web features and maintained application functionality in PHP, JavaScript and MySQL.
- Debugged and troubleshoot web applications.

PHP, JavaScript, MySQL

Web Development Intern, Universitas Hamzanwadi (vocational school internship) 2016, four months

- Supported website development and basic feature implementation.
- Tested and maintained existing functionality and assisted with bug fixes.

PHP, MySQL, JavaScript

PROJECTS

Device Monitoring System (*Go, Gin, PostgreSQL, WebSocket, JWT, Docker, Next.js*)

Realtime monitoring that tracks device availability through 10-second heartbeats, checks them every 5 seconds in the background, and marks a device OFFLINE after 30 seconds without a heartbeat.

github.com/shiinobu/device-monitoring-system

Disbursement API (*Go, MySQL, GORM, JWT, Docker*)

API for fund disbursement workflows with JWT authentication, role-based access control, a PENDING to APPROVED or REJECTED status flow, search, pagination and reporting.

github.com/shiinobu/disbursement-api

Manufacture System API (*Go, Gorilla Mux, MySQL, JWT, GitHub Actions*)

REST API for manufacturing data and purchase workflows.

github.com/shiinobu/manufacture-system-api

Tourism Management API (*PHP, Laravel, React, MySQL, Sanctum*)

Laravel REST API with a React frontend for managing tourism destinations and image content.

github.com/shiinobu/tourism-management-api

EDUCATION AND LANGUAGES

S1 Informatika (Bachelor of Informatics), Universitas Teknologi Digital Indonesia, Yogyakarta 2017 to 2023

Coursework focused on native PHP, Go, JavaScript and database engineering.

Languages: Indonesian, English
